

ERRATA

M. Keuls and Frida Garretsen, 1977. A general method for the analysis of genetic variation in complete and incomplete diallels and North Carolina II designs. Part I: Procedures and general formulas for the random model. Euphytica 26: 537–551.

Line 12 and 13 of page 544 should be read as:

$$X = \left\{ x_{ij} \right\} \text{ with } x_{ij} = n_{ij} + n_{ji} \quad i \neq j$$

$$= \sum_{j \neq i} (n_{ij} + n_{ji}) + 4 n_{ii} \quad i = j$$

A. Tasdighi and L. R. Baker, 1981. Combining ability for femaleness and yield in single and 3-way crosses of pickling cucumbers intended for once-over harvest. Euphytica 30: 183–192.

The last line of page 185 should be read as:

Single crosses. Among the parental lines, the highest GCA effects for % pistillate node was observed for the parent 'Gyl4' among the females; and for '661H' among the male lines (Table 5).
