Ordinal Independence in Nonlinear Utility Theory

JERRY R. GREEN
Harvard University

BRUNO JULLIEN
Harvard University

The Ordinal Independence Axiom on page 357 of the original article found in *Journal of Risk and Uncertainty* 1, 355-387, should read:

Ordinal independence

If $F \succeq G$ and $F(x) = G(x)$ for $x \geq \hat{x}$ (resp. $x < \hat{x}$), and if $\bar{F}(x) = F(x)$ and $\bar{G}(x) = G(x)$ for all $x < \hat{x}$ (resp. $x \geq \hat{x}$) and $\bar{F}(x) = \bar{G}(x)$ for $x \geq \hat{x}$ (resp. $x < \hat{x}$), then $\bar{F} \succeq \bar{G}$.
