A Phylogenetic Analysis Based on the Gene Encoding Phosphoglycerate Kinase
G. B. Vohra, G. B. Golding, N. Tsao, R. E. Pearlman
J Mol Evol (1992) 34:383–395

In Figure 1, a nucleotide (A) is missing from the sequence presented. Nucleotide 1009 is A, 1010 is A, and 1011 is T.

Another correction concerns the legend for Figure 2. The last sentence in this legend should read: "Amino acid 139 is encoded by the 3 nucleotides in exon II at the exon II/intron 2 boundary."
