

The number of parental and recombinant alleles for each marker were reported incorrectly in Fig. 1.\* The correct numbers of progeny from left to right are 51, 36, 1, 1, 1, and 3, respectively. The gene order shown is 307 times (LOD = 2.487) more likely than any other order. The correct percent recombination for the *D14Mit5-Sgp-2* interval is  $4.4 \pm 2.1$ .
