Fructose 2,6-bisphosphate metabolism during megakaryocytic differentiation of K562 and MEG-01 cells

Elisabetta Meacci, Valeria Vasta, Marta Farnararo and Paola Bruni

Department of Biochemical Sciences, University of Firenze, Viale G.B. Morgagni 50, 50134 Firenze, Italy

The publishers sincerely regret the publication of an incorrect Fig. 3 in the above-mentioned article (Molecular and Cellular Biochemistry 156: 125–130, 1996). Please find below the correct Fig. 3:

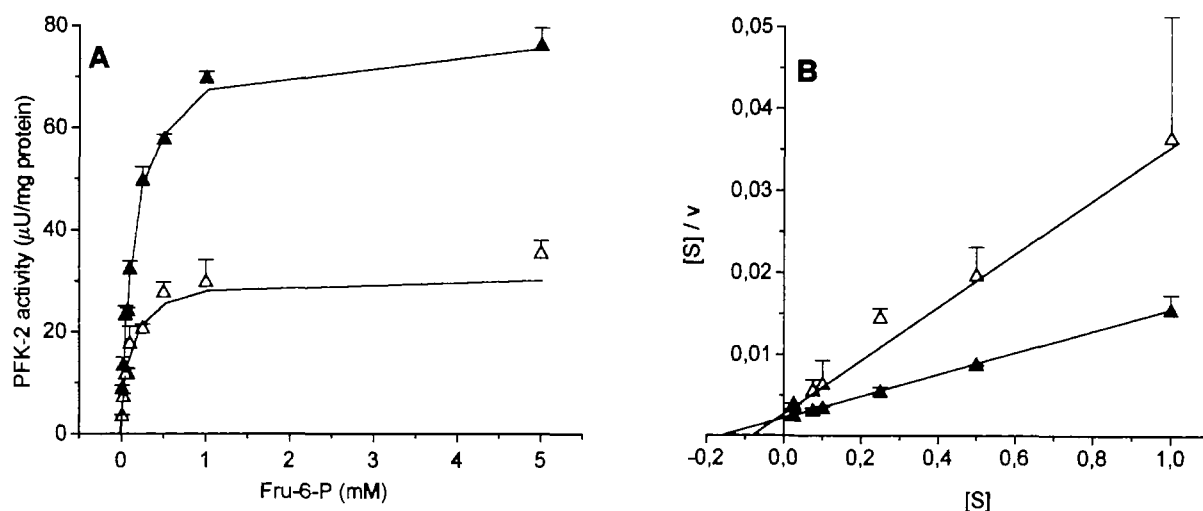

Fig. 3. Kinetic analysis of PFK-2 activity in K-562 cells. PFK-2 activity was determined as described in the Methods section in extracts from K562 cells incubated with 10 nM PMA (Δ) or 0.05% DMSO (\blacktriangle) for 4 days and then 3 days in the absence of the inducer. Data are means \pm S.E.M. of five experiments performed in duplicate. Hyperbolic curves were fitted to experimental points by non-linear regression analysis. In Fig. 3B Hanes-Wolf plot of the data is reported.
