

Erratum

In the paper: "Tertiary or Mesozoic Komatiites from Gorgona Island, Colombia: Field Relations and Geochemistry" by Lina M. Echeverría (Contrib. Mineral. Petrol. 73, 253–266, 1980) the numbers under the horizontal axis of Fig. 11 (page 264) are incorrect. The following version is the correct one:

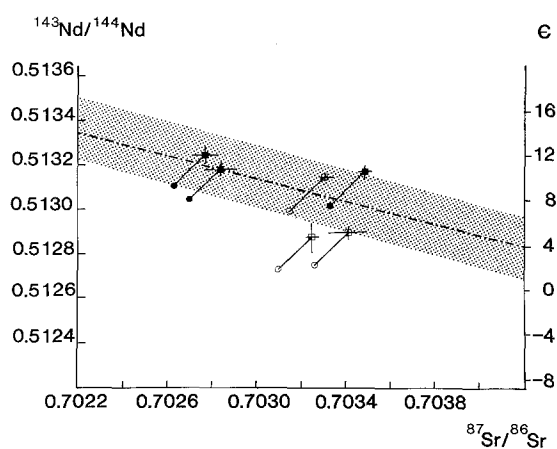

Fig. 11. Nd and Sr isotopic composition for Gorgona komatiites (*closed symbols*) and basalts (*open symbols*). The *dashed line* indicates the oceanic correlation line after O'Nions et al. (1977), and De Paolo and Wasserburg (1976), and the *shaded area* represents the field of oceanic basalts. Analytical errors shown by bars. Nd values have been normalized by subtracting 0.00009 from analysed values in order to conform to O'Nions et al. (1977) value for BCR-1 ($^{143}\text{Nd}/^{144}\text{Nd}=0.51262$), minimizing interlaboratory differences. The *squares* represent analyzed and normalized values, whereas the *circles* indicate initial values assuming an age of 100 m.y.
