## 20. Summary Session

(*Friday, March 22, 1974*)

A summary of each of the individual conference topics was presented.

- (1) Constraints on structure and composition of the lunar interior.
- (2) Characteristics and movement of materials in the lunar regolith.
- (3) Characterization and evolution of the mare basins.
- (4) Characterization and evolution of the lunar crust.
- (5) Nature of impact processes and their effects on lunar materials.
- (6) Exchange of material and energy between the Moon and its environment.

Full text of the Proceedings of this conference will be published by the Pergamon Press early in 1975. The abstracts of all papers submitted to the conference (900 pages in 2 parts) can be obtained from The Lunar Science Institute (Mrs Carolyn Watkins), 3303 NASA Road 1, Houston, Texas 77058, U.S.A. Price (must be prepaid): Continental U.S. \$ 1.00; Foreign \$ 6.00.

In this and the next issue of our journal we shall publish abbreviated abstracts of the papers included in the programme of the Conference.
