

## ERRATUM

Peter Müller and Wolfgang Kundt, 'The Colours of the Interstellar Medium', *Astrophys. Space Sci.* **155**, 153 (1989).

From Figure 2 of the above-mentioned paper the colour wedge (here reproduced in black and white) was erroneously omitted. The correct version is printed below.

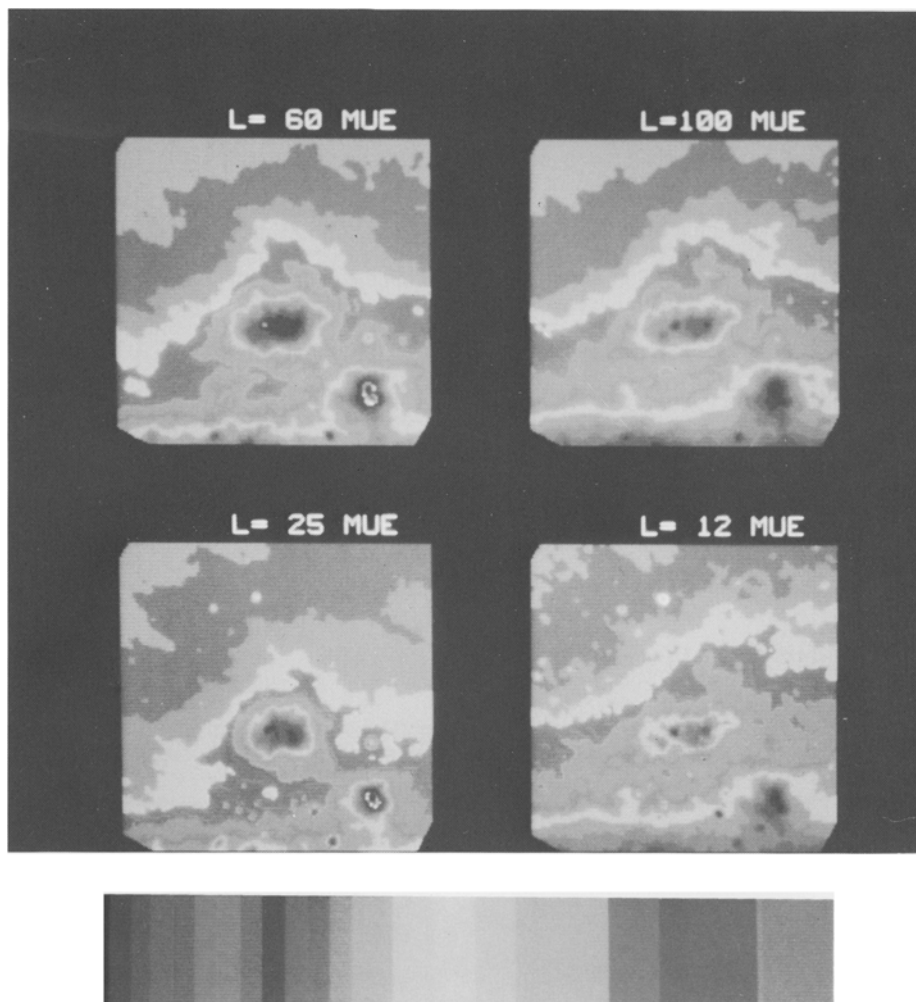

Fig. 2. IRAS maps of  $5^\circ \times 5^\circ$  field centered on  $(l, b) = (18.5^\circ, 2.5^\circ)$ , near the HII region S54, at  $\lambda \mu\text{m} = 60, 100, 12,$  and  $25$ . The original colour wedge runs from purple through blue, green and yellow to red, either logarithmically (Figures 2, 3, 6, 7) or linearly (Figures 4, 5, 8); its gray-scale reproduction is shown underneath, increasing in intensity from left to right.
