

ERRATUM

In the article "Influence of Structure on Relationship of Brass Strip Strength and Ductility" by S. G. Khayutin and M. Z. Pevzner (MSHT, No. 10, 1993) on page 584, eighth line from the top it should read:

...After treatment using variant 1 (final deformation), for equal strength the microstresses are significantly higher and the relative elongation and the parameter T are lower than after treatment using variant 2 (final annealing).
