

## Errata

In the article "Sociometric Status of Clinic-Referred Children with Attention Deficit Disorders with and without Hyperactivity by Carlson, *et al.* (*Journal of Abnormal Child Psychology*, Vol. 15, No. 4, 1987, pp. 537-547), the authors wish to correct the following errors:

In Table II, line 1, (p. 543) the value of 1.06 should carry the superscript *b*. In the last line, the value of -4.31 should carry the superscript *b*.

In the text, the last paragraph of the Results section (p. 543) should read as follows, and this correction should be applied to the statement contained in the Abstract:

Comparisons of groups both excluding and including children with codiagnoses revealed significant differences among groups on LM, LL, and social preference scores. In comparisons excluding children with codiagnoses, Normal control children received significantly higher LM and social preference scores than both ADD/H and ADD/WO groups, which did not differ from one another. In addition, ADD/H children received significantly higher LL scores than Normal Control and ADD/WO children, who did not differ from each other. When codiagnoses were included, a similar pattern was obtained, except that the ADD/H group also obtained significantly higher "fights most" scores than both ADD/WO and Normal Control children (who did not differ from each other), and that ADD/H and ADD/WO groups both received significantly higher LL scores than Normal Control children.
