

CALL FOR PAPERS

As from Volume 30 No. 1 (February 1984) this journal assumes a new title:

EARTH, MOON, AND PLANETS

This change is in accordance with the enlarged scope and interest of the journal, as described by the Editors in Volume 28 No. 1 (February 1983).

The journal *Earth, Moon, and Planets* provides an interdisciplinary medium for publication of original investigations of all aspects of planetary studies - including those of the Earth as a celestial body - with emphasis on those obtained by spacecraft and remote sensing side by side with those coming from more traditional methods of astronomical research, as well as review papers in the form of critical discussions of problems of current interest.

Articles for publication in *Earth, Moon, and Planets* are invited now and should be submitted (in duplicate) to any one of the Editors, as follows:

A. G. W. Cameron
*Center for Astrophysics
Harvard Observatory
60 Garden Street
Cambridge, MA 02138
U.S.A.*

Z. Kopal
*Department of Astronomy
The University
Manchester M13 9PL
England*

M. D. Moutsoulas
*National Center for Space
Research
Z Road
Hellenikon, Athens
Greece*
