Intraarterial hepatic chemotherapy with fluorouracil, fluorodeoxyuridine, mitomycin C, cisplatin or methotrexate as single-agent anticancer drugs for a transplanted experimental liver tumor in rats

In: J Cancer Res Clin Oncol (1996) 122: 421–426

The values given in the row "Mean tumor volume day 12 (mm³)" were actually total volumes for each group. The correct **mean** values are those given below:

Table 1 Main values of parameters measured (*n* number of cases). The mean tumor multiplication factor (*TMF*) is calculated from all single *TMF* values of a group

Parameter	Control	FdUrd	FUra	Mitomycin C	Cisplatin	Methotrexate
<i>n</i>	13	12	14	13	11	12
Dose (mg/kg)	–	400.0	90.0	6.0	7.0	16.0
Mean tumor volume day 5 (mm ³)	154.4	126.2	157.6	176.1	136.8	136
Mean tumor volume day 12 (mm ³)	1440.0	409.5	587.7	143.8	90.6	23.1
Animal weight days 5–12	–1	–17	–13	–22	–7	–11
Mean <i>TMF</i>	9.66	3.78	3.03	0.96	0.64	0.15
