VORBRÖDT, A. W. & TROWBRIDGE, R. S. (1991) Ultrastructural study of transcellular transport of native and cationized albumin in cultured sheep brain microvascular endothelium. *Journal of Neurocytology* **20**, 998–1006.

In the article cited above we stated the source of cultured endothelial cells was sheep. However, in a recently-completed cytogenetic study, it emerged that the endothelial cells were of goat origin. The error probably occurred as a result of mixing of skinned sheep and goat heads in the slaughterhouse.
