

Erratum

In the paper “Applications of NMR micro-imaging to the study of water, lipid, and carbohydrate distribution in grape berries” by J. M. Pope et al. [Protoplasma 173: 177–186 (1993)] on p. 181, right column, the sixth and the seventh sentence was incorrect and should read:

Figure 5 b is a chemical shift selective image of the water distribution obtained using a sinc-shaped excitation pulse of approximately 250 Hz bandwidth centred on the water peak. The sinc pulse was truncated at the third zero crossing on each side of the central maximum (sinc 3 pulse), giving an overall duration of 24 ms and a bandwidth of less than 250 Hz.
