Squaric Acid – A Realization of the Baxter Model?

Uwe Deininghaus

Institut für Physik der Universität, Dortmund, Federal Republic of Germany

Z. Phys. B - Condensed Matter 45, 71-78 (1981)

In order to be consistent with the discussion at the end of Sect. III, the formulae (5) and (6) should read:

$$\mathcal{H} = \int d^2 x \{ (\nabla \phi_1)^2 + (\nabla \phi_2)^2 + r(\phi_1^2 + \phi_2^2) + u(\phi_1^4 + \phi_2^4) + v\phi_1^2 \phi_2^2 \} \quad (5)$$

and

$$\mathcal{H} = \int d^2 x \{ (\nabla \phi_1)^2 + (\nabla \phi_2)^2 + r(\phi_1^2 + \phi_2^2) + \frac{v}{2} (\phi_1^2 + \phi_2^2)^2 + \left(u - \frac{v}{2}\right) (\phi_1^4 + \phi_2^4) \} \quad (6)$$
