

Correction

Upon the request of the author of the article "Further Improvement of Mining in Refractory Clay and Kaolin Deposits" published in Ogneupory, No. 1, 1961, p. 11, Table 1 should read as follows:

Company	Type of Primary Material	System of Stripping	Initial cost, rubles			
			1 cubic meter of stripping		1 ton raw material	
			1950	1959	1950	1959
Chelyabinsk Mining Administration	Fireclay	Transport-dumping	8.09	1.76	39.16	14.41
Chasov-Yar Deposits	Same	Same, without transport	5.22	1.85	30.47	14.70
Suvorovo Mining Administration	Same	Transport-dumping and transport	11.58	3.91	68.32	17.98
			5.23	2.0	38.53	17.0
Velikiy-Anadol' Chamotte Plant Deposits	Kaolin	No transport				

Editor's note to the article of G. Ye. Karas' in Ogneupory, No. 2, 1961, p. 99:

Based on the research carried out by Soviet experts the building project of an experimental industrial installation for the production of magnesite powder from the saline waters of the Sivash Lakes has been developed.

The project was approved in January 1960.

At the present time, building work is underway according to the approved project.

The development of the production process and a more thorough investigation of technical and economic factors will be followed by a study concerned with the possibilities of building a plant for the production of magnesite powder from Sivash saline water.
