Errata

The printing house apologizes for the bad quality of some pages in this issue. The worst legible parts are reproduced here anew.

– p. 885 at the bottom:

The matrix element $\langle \pi^+ \pi^- \pi^0 | O_{\Delta I=1}(0) | \eta \rangle$ is defined by the set of the constituent-quark-loop diagrams depicted in Fig. 7. In the leading order of the current-quark-mass expansion the main contribution comes from the diagrams in Fig. 7a and the pole-diagrams with the π^0 and η-meson exchange in Fig. 7b. The contribution of these diagrams is of the order of $O(1)$. The diagrams depicted in Fig. 7c

– p. 892, caption of the figure:

Fig. 1. The meson-pole-diagrams of the $\gamma\gamma \to \pi^+\pi^-$ process, where q_c denotes the constituent quark and $q = u$ or d.

– p. 895, Fig. 3:
