Arcispedale S. Anna Hospital,
I-44100 Ferrara, Italy

In reviewing our paper we have unfortunately found that we made two mistakes:

1. The scale of testosterone values (Fig. 1) should be from 0 to 1000 ng/dl, instead from 0 to 100 as shown in the figure.

2. The last sentence of “Results” in “Sequential clinical and basal hormonal data” should read as follows:

In contrast, a progressive reduction of FSH levels was observed in 9 girls, but in all of them the levels remained above the normal range.
