

ERRATUM

Figure 1A on page 402 of the article "Assessing potato cultivars in Tunisia for susceptibility to leak caused by *Pythium aphanidermatum*" by Sylvie Priou, M.A. Triki, M. El Mahjoub, M. Fahem and M. Souibgui, Potato Research 40 (1997), has dropped off entirely, while Figure 1B has been printed twice.

It should have been as follows:

Fig. 1. (A) Different levels of susceptibility of potato tubers (cv. Spunta) inoculated after wounding by dipping in an oospore suspension of *Pythium aphanidermatum* and incubated for 3 days at 25 °C. (B) After five days of incubation at 25 °C, the characteristic black colour of the tissue beneath the lenticels and the pink discolouration of the potato flesh is intensified.
