

## ERRATUM

In a recent paper by R. N. Wiedemann & R. J. O'Neil ('Response of *Nabis roseipennis* (Het.: Nabidae) to larvae of Mexican bean beetle, *Epilachna varivestris* (Col.: Coccinellidae)', Entomophaga, 35(3), 1990, 449-458), fig. 2 was inadvertently printed as a repetition of fig. 1 on page 454. The correct fig. 2 is as follows :

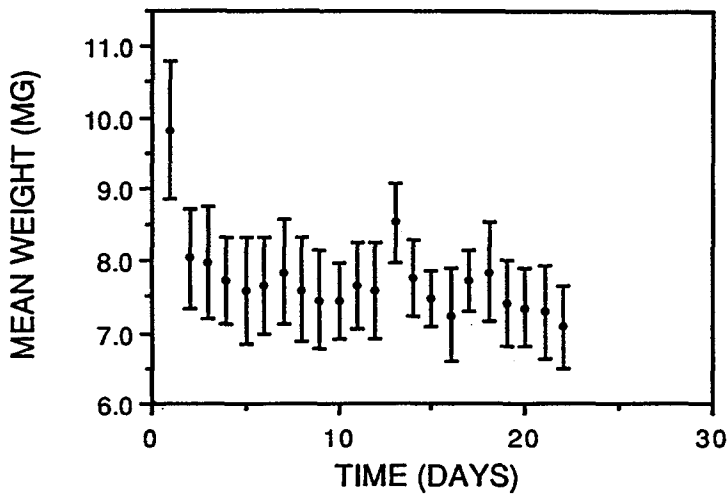

Fig. 2. Mean body weight (+/- S.E.) of *Nabis roseipennis* that attacked no prey on day 1, then were isolated with Mexican Bean Beetle larvae and lima bean leaf. No prey were attacked during the experiment. Weights are plotted until date of median longevity (22 days). Number of predators alive are : 5 on days 1-12, and 4 on days 13-22.
