

ERRATA

In issue No. 12 (1997) of the journal *Izmeritel'naya Tekhnika* in the paper "Development of Metrological Assurance for pH Measurement in Russia," terms were used which were changed in the final editing of the GOST project "The pH Scale for Aqueous Solutions" to avoid confusion with similar terminology. In the final version, the term "reference buffer solution" (RBS) was used instead of the term "standard reference material for pH" (a potassium hydrogen phthalate solution of molarity $0.05 \text{ moles/g}^{-1}$); and the term "standard buffer solutions" (SBS) was used instead of "primary standards for pH." The authors ask that the readers accept their apologies.
