The journal *Manuscripta Geodaetica* is established for the international publication of geodetic manuscripts in English or French, which because of their length, topic, or complex typography are normally unsuited for publication in the *Bulletin Géodésique*.

The *Manuscripta Geodaetica* will also provide a forum for open discussions on current geodetic problems as well as announcements and information of general interest. Papers on practical, theoretical, and computational problems may also be submitted to initiate discussion. To ensure rapid and accurate publication, the author's own typescript is reproduced.

Manuscripts may be submitted for consideration for publication to any member of the International Editorial Board who will supply instructions for the preparation of the manuscripts and for typing suitable for direct reproduction.

The following articles are being considered for the first issues :

S.F. Lauritzen, O. Remmer : "An Investigation of the Asymptotic Properties of Geodetic Least-Squares Estimates in Certain Types of Networks".

H. Moritz : "Integral Formulas and Collocation".

R. Rummel, K.P. Schwarz : "Considerations of the Global Covariance Function of the Earth's Anomalous Potential".

G. Balmino, C. Reigber, B. Moynot : "A Geopotential Model Determined from Recent Satellite Observing Campaigns (GRIM 1)".

Subscription rates for Volume 1 (1976), 4 issues, are as follows :

regular subscription	DM 40,-
reduced rate, certified private use (no institutes, libraries, etc...)	DM 31,-
