

METHODS

by our new synthetic methods. This confirmed that these two isomers can be distinguished if the olefinic region of the ^{13}C NMR spectrum is scrutinized carefully. It is hoped that the publication of straightforward syntheses of the two *cis,trans* geometrical isomers of linoleic acid will stimulate further useful experiments in the evaluation of the biochemical and nutritional effects of these compounds.

ACKNOWLEDGMENTS

This research was supported by the National Institutes of Health. MOF is the recipient of a Research Career Development Award from NIH. Preliminary experiments were carried out by P. Z. DeCroos.

[Received November 16, 1984]

ERRATA

In "Moderate Changes in Linoleate Intake do not Influence the Systemic Production of E Prostaglandins," by A. Ferretti, J.T. Judd, M.W. Marshall, V.P. Flanagan, J.M. Roman and E.J. Matusik Jr. in the May 1985 issue of *Lipids* an error was made in Table 3 of page 271. The PGE-M values are given in $\mu\text{g/g}$ creatinine, not in ng/g creatinine as indicated in the heading (far right column) and in footnote c.
