MARTIN C. TANGORA, **Computers in Geometry and Topology**, Marcel Dekker Inc., New York, 1989, 336 pages, \$99.75 (USA, Canada), \$119.50 (all other countries).

1. The Computation of Rational Homotopy Groups Is \mathcal{P} -Hard (David J. Anick). – 2. Geometry of the Hopf Mapping and Pinkall's Tori of Given Conformal Type (Thomas F. Banchoff). – 3. Environments: An Algebraic Computing Technique (Max Benson). – 4. Calculation of Large Ext Modules (Robert R. Bruner). – 5. EHP Computations of $E_2(S^n)$ (Edward Curtis and Mark Mahowald). – 6. Use of a Computer to Suggest Key Steps in the Proof of a Theorem in Topology (Donald M. Davis). – 7. Local Symmetry in the Plane: Experiment and Theory (Peter J. Giblin). – 8. On Crossing the Boundary of the Mandelbrot Set (Ivan Handler, Louis H. Kauffmann and Dan Sandin). – 9. A Stable Decomposition of BSD_{16} (John C. Harris). – 10. Algorithms for Computing the Cohomology of Nilpotent Groups (Larry A. Lambe). – 11. Self-Similarity and Hairiness in the Mandelbrot Set (John Milnor). – 12. Homotopy Groups of Spheres on a Small Computer (Douglas C. Ravenel). – 13. A Computer Language for Topologists (David L. Rector). – 14. Parabolic Representations and Symmetries of the Knot 9_{32} (Robert F. Riley).

V. LAKSHMIKANTHAM, S. LEELA, and A. A. MARTYNYUK, **Stability Analysis of Nonlinear Systems**, Marcel Dekker Inc., New York, 1989, 336 pages, \$89.75 (USA, Canada), \$107.50 (all other countries).

1. Inequalities. – 2. Variation of Parameters and Monotone Technique. – 3. Stability of Motion in Terms of Two Measures. – 4. Stability of Perturbed Motion. – 5. Models of Real World Phenomena.

HEINRICH RENELT, **Elliptic Systems and Quasiconformal Mappings**, John Wiley & Sons Ltd., 1988, 146 pages, £14.95.

O. Auxiliary results from analysis – I. Quasiconformal Mappings and Solutions of Beltrami Systems – II. Elliptic Systems of Partial Differential Equations of First Order in the Plane – III. Some Function Theoretic Properties of (ν, μ) -Solutions – IV. Integral Transformations and Fundamental Solutions – V. Integral Formulae for (ν, μ) -Solutions – VI. Variational Methods for Schlicht (ν, μ) -Solutions.

EVA LOWEN-COLEBUNDERS, **Function Classes of Cauchy Continuous Maps**, Marcel Dekker Inc., New York, 1989, 166 pages, \$89.75 (USA, Canada), \$107.50 (all other countries).

1. Extensions and Continuously Extendible Functions. – 2. The Categories *Conv*, *Chy*, *Near*, and *Mer*. – 3. Classes of Real-Valued Continuously Extendible Functions. – 4. A Comparison of the Classes of Continuous and the Classes of Cauchy Continuous Maps. – 5. Characterizing the Function Classes $\Gamma(X)$. – 6. Compatible Cauchy Spaces with a Given Collection of Cauchy Continuous Maps.

VICTOR GUILLEMIN, **Cosmology in (2 + 1)-Dimensions, Cyclic Models, and Deformations of $M_{2,1}$** , Princeton University Press, 1989, 228 pages, \$50. — (cloth), \$15. — (paper).

Part I. A Relativistic Approach to Zoll Phenomena (§§1–3). – Part II. The General Theory of Zollfrei Deformations (§§4–8). – Part III. Zollfrei Deformations of $M_{2,1}$ (§§9–13). – Part IV. The Generalized x-ray Transform (§§14–17). – Part V. The Floquet Theory (§§18–19).
