

INTERNATIONAL SYMPOSIUM ON SEISMIC MODELS

Geophysical Institute of the Czechoslovak Academy of Sciences will organize under the auspices of the Upper Mantle Committee and the International Association of Seismology and Physics of the Earth's Interior a symposium on seismic models. The symposium will be held on 9—12 November 1965 in the Castle of Liblice near Prague. The Scientific programme will include theory and basic concepts of seismic models, fabrication of seismic models, apparatus for seismic modelling, and application of seismic models in seismology, especially models of the Earth's crust and mantle (body and surface waves) and models of seismic sources.

One of the aims of the organizers has been to choose a place where participants might live together in quiet surroundings, in order to facilitate personal contacts and informal discussions. Such conditions can be found in the Castle of Liblice, where the symposium will be held. The number of participants will be limited to fifty.

Any requests for additional information and application form should be addressed to the Organizing Committee, Geophysical Institute, Czechosl. Acad. Sci., Boční II, Praha 4-Spořilov, Czechoslovakia.
