Creation-field theory from dimensional analysis

In equation (2.8) of this work, a factor σ should occur on the right hand side, and in equation (2.9) there should be a factor σ^{-1}. Consequently, the factors e^C in (5.8) and subsequent equations should be absent. Because of this error, the conclusions of section 6 are wrong. The cosmological implications of the conformally-invariant two-scalar theory are still under investigation.

Optical colours and polarization of a model reflection nebula.

Equation 21: The minus sign in the denominator is to be changed to plus.
