Comments and Addenda

C-Ge System

The melting point for carbon as shown in Fig. 1 of the *Bulletin*, 5(5), 484 (1984) and in the tear-outs on pages 525-

526 is incorrect. It has been changed to 4036 °C in the figure below, which agrees with the C-Ge text and with the C-Si evaluation that follows in the same issue.
