On page 99, Materials and methods, section “Immunocytochemistry”, first paragraph, a wrong value was given for the incubation step with Protease Type VII used during the immunocytochemistry on Carnoy-fixed, paraffin-embedded material. The protease incubation step should read as follows:

Incubation “with Protease Type VII (Sigma, St. Louis, USA; 25 $\mu\text{g/ml}$ in 0.5 M Tris buffer, pH 7.6) for 10 min at 37° C”.
