

## Clinical Evaluation of Isoflurane

### ACKNOWLEDGEMENTS

The authors wish to pay tribute to the many participating institutions and, in particular, the monitors in each hospital. The size of this study created difficulties in both methodology and data collection and each monitor played a vital role in overcoming these by ensuring accuracy of reporting. In recognizing these contributions, the authors also wish to express their appreciation to the numerous other colleagues on the academic staffs of each institution for their enthusiastic support and cooperation.

The support of Ohio Medical Products Inc. in Canada and the United States of America deserves special mention. Apart from considerable financial support, the help and forbearance of a number of individuals is gratefully acknowledged. In particular, Mr. W. Wynne, Marketing

Manager, Anesthetic Agents; Mr. W.J. Hamilton, Manager, New Products, Anesthetic Agents; Dr. R.C. Terrell, Manager, Pharmaceutical Research; and Mr. B. Smith attended to the countless organisational headaches imposed on them by the authors, calmly and effectively. Their willingness to allow complete freedom to the authors in the design, execution, and interpretation of the results of the study has remained throughout.

The authors also wish to thank Dr. E.I. Eger, II and Dr. J.G. Wade for advice and invaluable critique of the study protocol and for collaborating on field testing of the evaluation form.

Finally, we owe a special debt to Miss Anne Popov and Mrs. Kay Peterson for typing the manuscript.
