Western Michigan University

These papers were presented at a symposium held at the 93rd annual convention of the American Psychological Association, August, 1985, Los Angeles, CA. The papers, in order, address the following topics: the history of operant research with human subjects with particular attention to the type and quantity of research conducted since the mid-1950s; interpretation versus experimentation in the experimental analysis of human behavior (EAHB) with particular emphasis on rule-governed behavior; the historical and current roles of children as subjects in operant research; the relation between basic laboratory research with humans and applied behavior analysis; and the need for future research concentrating on complex human behavior. Each of these papers is discussed in the final section of the proceedings.

These proceedings are dedicated to the memory of Aaron Brownstein, colleague and friend. Correspondence may be sent to the authors at the following addresses: W. Buskist, Psychology Dept., Auburn University, Auburn, AL, 36849; B. C. Etzel, Dept. of Human Development, 130 Haworth Hall, University of Kansas, Lawrence, KS, 66045; S. M. Deitz, Educational Foundations, Georgia State University, University Plaza, Atlanta, GA, 30303; M. Galizio, Psychology Dept., University of North Carolina, Wilmington, NC, 28406; R. Shull, Psychology Dept., University of North Carolina, Greensboro, NC, 27412; Jack Michael, Psychology Department, Western Michigan University, Kalamazoo, MI, 49008.
