RETRACTION NOTE

Retraction Note: Radiation-induced glucocorticoid receptor promotes CD44 + prostate cancer stem cell growth through activation of SGK1-Wnt/ β -catenin signaling

The Editor-in-Chief has retracted this Article because of several irregularities in figures. Specifically: Fig. 5f p-B-catenin lane which appears to be identical to Fig. 4a p-Stat3 lane [1] and Fig. 6a p-stat3 [2]; Fig. 5b the first GAPDH lane which appears to be identical to Fig. 3c cytosolic GAPDH lane [1]; Fig. 4e images for both GR IHC stains which appear to be identical to Fig. 5e IHC GR stains [3]. An investigation by the University of Rochester Medical Center did not find any evidence of misconduct. However, owing to the number of errors the Editor-in-Chief no longer has confidence in the reliability of the work presented in the article. Soo Ok Lee, Peter Keng, and Yuhchayau Chen agree to this retraction. Feng Chen, Xiaodong Chen, Yu Ren, and Guobin Weng did not respond to correspondence from the Publisher about this retraction.
