Owing to an oversight by the authors during editing and revision of the manuscript incorrect information on the process of ethical approval appeared in the original publication. The erroneous text read: “The protocol was approved by the Research Ethics Boards at the University of Cambridge who waived the requirement for written informed consent.”

The correct text is as follows:

Consecutive traumatic brain-injured patients with a clinical need for ICP monitoring were included for analysis. Informed consent was obtained from all patients (or their next of kin) for the use of collected data for research purposes. The study was approved by the relevant research ethics committee (29 REC 97/291).
