The Editor in Chief retracted this article (1) because of significant concerns regarding a number of images presented in Figure 6c, which question the integrity of the data. It appears a number of the histopathology images have been published previously in unrelated articles (2, 3, 4). In addition, it appears that an image used in Figure 1c (SAOS-2 at 0uM) has also appeared in unrelated articles with different labels (5, 6).

The authors were unable to provide raw data and stated that the figures were obtained through a commercial lab hired to perform some of the experiments for this study.

Author B Tian agrees to this retraction. The other authors have not responded to any correspondence from the editor or publisher about this retraction.

The online version of this article contains the full text of the retracted article as electronic supplementary material.
