This volume is devoted to selected papers from the 2nd International Symposium on Computer Science in Russia (CSR 2007), held 3–7 September in Ekaterinburg, Russia.

CSR 2007 was the second event in a series of regular international meetings that commenced with CSR 2006 in St. Petersburg. The symposium was organized under the auspices of the European Association for Theoretical Computer Science. The scope of the symposium was quite broad, covering many areas of computer science and its applications.

The symposium itself consisted of two tracks: Theory and Applications/Technology. This volume contains papers from the Theory Track (Program Committee Chair Volker Diekert), selected by the editorial board, which was appointed by the Program Committee. These papers have all been refereed according to usual ToCS standards. This renders the current volume very selective.

We wish to thank Ural State University, Mathematics and Mechanics Institute of the Ural Branch of the Russian Academy of Sciences, for their support of Symposium CSR 2007.
