Owing to an error in typesetting during the publication process, two footnotes are incorrect in Table 2. In the text, the 95% confidence intervals for the interindividual variability (IIV) in apparent oral clearance ($(\eta_i)_{CL/F}$) and apparent volume of distribution ($(\eta_i)_{V/F}$) bear footnotes marked 'b' and '†', respectively. These should both have been marked as having been calculated from NONMEM standard errors, which is footnote 'f'.
