Case

A 39 year old woman presented with a 5 month history of a painless lump in the medial aspect of her right thigh. MR imaging was performed and is shown in the figures Figs. 1, 2 and 3.

What is the diagnosis?

Fig. 1 Axial T1W MRI at mid-thigh

Fig. 2 Axial fat-saturated T2W MRI at mid-thigh

The diagnosis can be found at doi: 10.1007/s00256-016-2386-7
