Correction to: Skeletal Radiology
<https://doi.org/10.1007/s00256-023-04491-5>

We have unfortunately noticed a small typographical error in the abstract of our recent case report.

The third sentence of the abstract reads:
We present an **usual** case of a 55 year-old male patient who presented with multiple FDG-avid bone lesions on a background of conventional chondroblastoma of the rib excised at another institution 11-years previously.

Should have been:

We present an **unusual** case of a 55 year-old male patient who presented with multiple FDG-avid bone lesions on a background of conventional chondroblastoma of the rib excised at another institution 11-years previously.

The original article has been corrected.
