The aims and the structure of this publication are clearly individuated in the title “[Ultrasound Q&A: Review for the Boards](#).”

To answer to this task, the editor Adrian Dawkins, Medical Director of Radiology and Associate Professor at the University of Kentucky in Lexington, invited experts in the field to choose exemplary questions that can be helpful for the preparation to the exams requested by the American Board of Radiology (ABR). The structure of the book is therefore very simple, being based on a multiple choice format, including, for each issue, 1 question and 4 possible answers. Then, the correct and incorrect responses are briefly explained.

This paperback of 176 pages, enriched by 236 illustrations of high quality, also includes complimentary access to a digital copy on <https://medone.thieme.com>.

Of course, to pass the exam, this typical refreshing book, suitable for a self-evaluation approach, has to be

enforced by a preliminary deeper study of the argument and a practice in the field. The publication presents fundamental and practice-oriented concepts in ultrasounds organized in the following 11 chapters: (1) Gynecology and First Trimester Obstetrics; (2) Second Trimester Obstetrics; (3) Pediatrics; (4) Renal; (5) Hepatobiliary; (6) Musculoskeletal; (7) Breast; (8) Neck; (9) Scrotum; (10) Miscellaneous; (11) Physics. References at the end of each chapter provide readers with resources for further exploration.

As reported above, this book is therefore very useful for all the people interested to acquire the ABR. Furthermore, it can be helpful for residents, students, sonographers, practitioners, and all the other professionals interested to evaluate by themselves the capability to read and interpreter ultrasonographic images.
