**Correction to: *Cardiovasc Intervent Radiol* (2019) 42:495–504**  
<https://doi.org/10.1007/s00270-018-2137-3>

In their recently published pooled analysis of four drug-coated balloon (DCB) studies, which focused on the impact of patient and lesion characteristics on LLL at 6 months (Albrecht T et al. *Cardiovasc Intervent Radiol*. 2018 Dec 11. <https://doi.org/10.1007/s00270-018-2137-3>), the

authors reported slightly inaccurate 2-year mortality rates. We would like to rectify this. The discrepancies were as follows: The correct mortality rates are 7.0% for the control group and 8.6% for the DCB group ( $p = 0.55$ ), while the authors erroneously reported these rates as 5.5% (controls) and 7.9% (DCB,  $p = 0.32$ ). The reason for these discrepancies was mainly the imprecise calculation of the number of patients available for 2-year follow-up. Details can be found in a follow-up paper published recently in CVIR (Albrecht T, Schnorr B, Kutschera M et al. *Cardiovasc Intervent Radiol*. 2019. <https://doi.org/10.1007/s00270-019-02194-w>).
