<https://doi.org/10.1007/s00294-018-0864-2>

In the original publication, Fig. 1 panel (b), the photo of MoPmt2-6 was incorrect. The correct Fig. 1 is shown below.

Fig. 1 MoPmt4 is essential for normal mycelial growth. **a** Colony diameters of the tested strains on different media were measured at 5 dpi and statistically analyzed. **b** The tested strains were inoculated in liquid CM for 48 h at 28 °C in darkness and then photographed. **c** The fungal mycelia of tested strains were collected at 3 dpi and 5 dpi, freezing dried, and statistically analyzed. **d** Hyphae branches of Guy11, MoPmt4 mutants and MoPmt4c were examined under light microscope. **e** Hyphae length between the branches of the tested strains were measured and statistically analyzed. Asterisks in Fig. 2a, c, e indicate significant differences. Error bar represents standard deviation
