Correction to: European Radiology

<https://doi.org/10.1007/s00330-021-07973-z>

The original version of this article, published on 20 April 2021, unfortunately contained a mistake. The following correction has therefore been made in the original:

The last sentence of the seventh paragraph was worded incorrectly. The correct wording is: “In spite of 45 out of 46 neonates having no significant WMI on conventional MRI, the radiomics analysis showed a good performance for predicting a poor NDO at 12 months of corrected age.”

The original article has been corrected.

Publisher's note Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.
