Fig. 3 Sample data of signal transmission on one vine at 100 Hz in **a** matrix plot of time and distance (gray scale is velocity amplitude mm s^{-1}); **b** time vs. velocity amplitude at different distances from the source (colors are the distances from the source in meters, with red at

the mini-shaker to blue furthest away); **c** magnified view of **b** showing details of the low-amplitude traces. Sample data from different frequencies can also be seen as a video representation for each frequency in the supplemental materials (suppl. video 1–6)
