Correction to: Biology and Fertility of Soils

<https://doi.org/10.1007/s00374-019-01416-0>

The publisher regrets that the equation within the “Calculations of soil priming effect” section and Fig. 2 where incorrectly presented in the original version of this article.

The online version of the original article can be found at <https://doi.org/10.1007/s00374-019-01416-0>

The equation below should read:

Fig. 2 Soil priming effect of the Chinese-fir and *Castanopsis* forests under different treatments. Values are means $\pm$ SD ($n = 3$). Treatments are control, nitrogen addition (N), leaf-derived dissolved organic matter addition (DOM), and leaf-derived dissolved organic matter plus N addition (DOM+N). Different letters indicate statistical significance at $\alpha = 0.05$

$$P_{\text{DOM}} = (\delta^{13}\text{C}_{\text{sample}} - \delta^{13}\text{C}_{\text{control}}) / (\delta^{13}\text{C}_{\text{DOM}} - \delta^{13}\text{C}_{\text{control-S}})$$

The original article has been corrected.

The figure 2 should be presented as follows:
