## **Correction to: Climate Dynamics**

https://doi.org/10.1007/s00382-021-06043-w

In the original publication of the article, there is a typesetting error in the order of reference list about Li et al. (2019a) and Li et al. (2019b).

Li et al. (2019a) should be as.

Li Z, Sun Y, Li T, Ding Y, Hu T (2019a) Future changes in East Asian summer monsoon circulation and precipitation under 1.5 to 5 °C of warming. Earth's Future 7:1391–1406. https://doi.org/10.1029/2019EF001276.

Li et al. (2019b) should be as.

Li J, Ding R, Wu Z, Zhong QJ, Li BS, Li JP (2019b) Interdecadal change in potential predictability of the East Asian summer monsoon. Theoret Appl Climatol 136:403–415. https://doi.org/10.1007/s00704-018-2482-9.

Correspondingly, there is correction about the reference citation Li et al. (2019a) in the original publication of the

article in the introduction section. The new text could read as,

"Similarly, Li et al. (2019a) found that both the overall EASM circulation and precipitation will be enhanced under global warming, which is different from the projection for other monsoon regions. Moreover, the relative contributions from the dynamic and thermodynamic components to future precipitation changes are similar when the global warming increase is less than 2 °C, but the dynamic component becomes dominant under further warming. Ha et al. (2020) examined projections in the Phase 6 of the ensemble experiments of the Coupled Model Intercomparison Project (CMIP6), and diagnosed an earlier onset and later termination of the projected EASM, but their study did not identify the underlying causes of the changes."

This error does not affect the previously published results. The original article has been corrected.
