

When we published the article

“Sheerin U-M, et al. (2008) Subarachnoid heamorrhage as the first clinical manifestation of Chrug-Strauss-syndrome. J Neurol 255:607-608” [The online version of this article can be found at <http://dx.doi.org/10.1007/s00415-008-0765-2>]

Figure 1 appeared erroneously without legend. The complete figure is printed below.

Fig. 1 Magnified lateral right ICA angiogram showing irregularity of calibre of the Sylvian and opercular segments of several of the right MCA branches. The proximal middle cerebral artery and supraclinoid carotid artery are also narrowed. While these appearances are not specific for vasculitis, as no aneurysm was evident, vasculitis was favoured over vasospasm due to SAH. 402 x 331mm (72 x 72 DPI)
