Unfortunately, one paragraph under the heading “Reference material and normal values” was published with errors. The correct formula is given here.

The Z-score was calculated according to the formula:
$$\frac{[\ln IENF \text{ (patient value)} - (2.733 - 0.004 * \text{age} - 0.178 * \text{gender (1 men, 0 women)})]}{0.343}$$
