Correction to: Graefe's Archive for Clinical and Experimental Ophthalmology
<https://doi.org/10.1007/s00417-021-05071-w>

The original publication of this paper contains inaccuracies in the key messages.

The authors prefer some short and on point statements, such as:

Key messages

- Endophthalmitis is a sight-threatening postoperative complication.
- Immediate PPV with subsequent intravitreal injection of antibiotics can restore BCVA.
- PPV should be carried out as early as possible, where available.

The original article has been corrected.
