Correction to: Psychological Research
<https://doi.org/10.1007/s00426-018-1032-5>

The original version of this article unfortunately contained a mistake. The presentation of Fig. 2 was incorrect. The corrected Fig. 2 is given below.

Fig. 2 **a** Example for targets only trials and filtering trials in Experiment 2. Participants were asked to remember all the colors of the circles (targets) and ignore the circles with a triangle opening (distractors). The distractors either formed a Kanizsa triangle (grouping by illusory object), appeared in a configuration of a triangle (group-

ing by proximity), or appeared in random positions (no grouping). **b** Results from Experiment 2. Accuracy as a function of Condition. Error bars represent 95% confidence intervals according to Loftus and Masson (1994)
