Correction to: Virchows Arch (2012) 460: 123–127

<https://doi.org/10.1007/s00428-011-1183-x>

It has been identified that one of the dosages listed within the above article was incorrectly abbreviated during the production process.

In section ‘Clinical history’ on Page 124, the article reads:

“Major improvement of the infant's condition only occurred after starting anti-inflammatory treatment, using intravenous prednisone and subsequently oral beclomethasone **200 mg** three times daily.”

This should instead read **200 micrograms**, as stated by the authors in the accepted manuscript. Thus the sentence should read:

“Major improvement of the infant's condition only occurred after starting anti-inflammatory treatment, using intravenous prednisone and subsequently oral beclomethasone **200 mcg** three times daily.”

No further corrections have been made.

Publisher's note Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.
