The authors have retracted this article because after its publication, they noticed that there were problems with the data source. The paper adopted the method of using ‘the first successfully matched table’ for the data extraction which is correct in cases where the consolidated statement comes first and the parent company statement comes

second. However, using this method some of the financial data used came from the parent company while some of the data came from consolidated statements. This caused errors in the initial sample set and so the conclusions made in this article can no longer be considered accurate. All authors agree to this retraction.
